

GIRO SPORT DESIGN 2016

Giro Cycling Shoes

The Last Comes First

The most important thing we've learned about fit in Giro's 30-year history is that fit is more than a set of numbers.

From the beginning, our goal has been to combine the best materials with design that inspires the rider, and that allows the shoe to adapt to the body's needs. That is why every Giro cycling shoe combines a supple, precision fit upper with a neutral pedaling platform (no varus or valgus adjustment built-in) and room for internal and external adjustments based on a rider's individual needs.

The key to Giro's acclaimed footwear fit is the last, which is the solid three dimensional form that shoes

are built around. It is the most critical component in making shoes because it determines the shape, volume and fit of the shoe.

Every Giro shoe is sized and shaped on our own, proprietary fit "lasts" that create a snug, secure feel for optimal comfort and power transfer. Each part of the last contributes to the overall fit, with the sole purpose of improving your connection to the bike. Because cycling shoes are more than shoes, they're the transmission point that keeps you moving mile after mile.

The Sole of Adventure

Whether it's a scenic vista that forces you to stop and stare; or a dab on a technical trail; or a hard slog up a hill; sometimes you have to step off the pedals. And when it comes to grip and durability, Vibram® is the world leader in high-performance rubber soles.

For more than 70 years, the famous yellow octagon has been synonymous with quality, performance, safety, innovation and design. Since revolutionizing outdoor adventure with the creation of the first rubber sole for mountain climbing in the '30s, Vibram has made a constant commitment to research and development. So when we design shoes that need to work as well off the pedals as they do when they're on the pedals, we turn to Vibram for a better connection.

Every Vibram outsole we use on Giro shoes is designed with the best compounds and tread designs for the specific need. New soles are always produced with the objective to create the best performance, and to guarantee the maximum level of comfort and quality over time.

The Original Fit System

Once upon a time, nearly every shoe had a laced closure. In the last few decades however, mechanical closures have been developed to mimic the function of laces while providing the ability to adjust fit on-the-fly. But with each new system, there is always a tradeoff to be considered: limited tolerance to grit and grime; added weight; increased exposure to damage in a crash; or less precise fit adjustment.

When we first considered a laced cycling shoe, we weren't sure it would fly. But in riding and evaluating laced shoes, we quickly fell in love with the benefits that laces provide. And we realized that many of the drawbacks people associated with laces were not due to the laces, but due to the shoe uppers.

Traditional leather uppers and even some early microfiber uppers were prone to stretch with wear and weather. With the latest microfiber materials we can fine tune the structure and pattern of the upper to make the most of a laced closure.

So why laces? Because the fit and feel of a laced shoe is unrivaled. From different lacing patterns to more incremental adjustment points, laces simply provide more range when it comes to fit, and the feel is more natural. They're also incredibly light weight, easy to replace and hard to destroy in a crash. Are they for everyone? No. But they are for anyone who wants a shoe that is lighter, more comfortable and reliable enough to handle a Grand Tour or your most punishing off-road pursuits.

Empire SLX

YES, THEY'RE THAT LIGHT

At just 175 grams (size 42.5), the Empire™ SLX sets the standard for light weight cycling footwear. Yet it doesn't compromise the structure or stiffness needed to put full power to the pedals thanks to a combination of exceptional fit, a new Evofiber™ SL one-piece upper, and the Easton® EC90™ SLX2 high-modulus outsole. And with replaceable heel pads, full titanium hardware and our adjustable SuperNatural Fit Kit, these are full-featured shoes built to win, and built to last.

Privateer R

OUR CLASSIC TRAIL SHOE, NOW WITH A RUBBER OUTSOLE

We took our classic trail shoe and made it even better. The Privateer™ R features a new nylon and rubber co-molded outsole for durability and improved grip on rocks or roots. The reinforced toe box boasts a rubber toe-guard for improved durability yet comfort reigns supreme with a supple microfiber upper two straps and a micro-ratcheting buckle. Those features, combined with the stiff and efficient nylon outsole, create a shoe that rivals the performance of more expensive composite designs. Other highlights include aggressive lugs for improved traction, toe spike compatibility and a supportive EVA footbed with Aegis® anti-microbial treatment.

Privateer R HV

THE CLASSIC TRAIL SHOE, WITH EXTRA VOLUME

The Privateer™ R HV model takes the same performance as our standard Privateer R, but accommodates high volume and extra-wide feet. This shoe features a new nylon and rubber co-molded outsole for exceptional durability and improved grip on rocks or roots. The reinforced toe box boasts a rubber toe-guard for improved durability yet comfort reigns supreme with a supple microfiber upper two straps and a micro-ratcheting buckle. Those features, combined with the stiff and efficient nylon outsole, create a shoe that rivals the performance of more expensive composite designs. Other highlights include aggressive lugs for improved traction, toe spike compatibility and a supportive EVA footbed with Aegis® anti-microbial treatment.

UPPER:

Durable welded and stitched upper

High-quality, breathable microfiber

Strong and secure N-1 ratcheting buckle closure (replaceable)

SHOES

Chamber

DOWNHILL DONE RIGHT

Don't be fooled by the skate-inspired, street shoe look – the Chamber™ is a pure performance race shoe packed with technical features. An SPD-compatible, dual-injected shank merges efficient pedaling with a flexible forefoot; an internal bootie secures the foot and keeps mud and other debris out; and the Vibram® rubber outsole provides grip and durability. Whether you're clipping in for a world championship race run or exploring your local singletrack, the Chamber is ready to shred.

Jacket

GRIPPIN' AND SHREDDIN'

The Jacket™ transforms the flat pedal riding experience, thanks in part to the Vibram® MegaGrip™ rubber outsole. This rubber compound was engineered for exceptional grip for trail riding, dirt jumping and downhill. Other highlights include a low-profile upper, an EVA cushioning in the midsole (that helps to reduce shock) and a Poron® XRD™ heel pad that helps minimize the impact of hard landings and bailouts. With a variety of on-point color options, these shoes are just as comfortable at happy hour in the Whistler Village as they are bombing down A-Line.

Carbide R

OUR CORE MTB SHOE REIMAGINED WITH RUBBER

The Carbide™ R is a baseline XC shoe with the comfortable, supportive fit found in our premium shoes, combined with a nylon and rubber co-molded outsole. This results in impressive durability and improved grip and traction in rocks and mud. The upper is made of supple synthetic leather with three wide straps that allow easy fit adjustments while a supportive EVA footbed with Aegis® anti-microbial treatment enhances comfort. A stout injected nylon sole helps transfer power to the pedals instantly, enhancing your connection to the bike.

Solara II

THE COMFORT AND STYLE OF PREMIUM SHOES, WITHOUT A PREMIUM PRICE

The Solara™ II is built with the same comfortable fit as our premium shoes, thanks to a supple microfiber upper and a micro-ratcheting, low-profile buckle that offers precise fit adjustment. The upper is now welded and bonded, resulting in fewer seams for reduced hot spots and improved comfort. A supportive EVA footbed with Aegis® anti-microbial treatment is matched with our stiff DuPont® Zytel™ nylon outsole to create an efficient, powerful platform for transferring energy to the pedals. It's a great choice for enthusiasts or recreational riders who are on the road to becoming dedicated cyclists.

SHOES

Civila

FIT FOR YOUR DAILY ADVENTURES

A recreational riding favorite, the women's Civila™ is hardworking enough to get you where you're going, yet it remains stylish and walkable once you get there. A low-profile microfiber lace-up construction blends seamlessly with street wear, and high-traction walking pads on the firm nylon outsole make for a sure-footed experience on the pedals or on the trail. Our Performance Fit last helps the Civila™ stay as comfortable at mile 30 as it was at mile 1.

PRECISION FIT

Giro footwear is built on proprietary cycling-specific lasts to create a fit that hugs the foot closely without binding, crowding or discomfort. Our lasts are hand-crafted specifically for cycling footwear in whole and half-sizes that are differentiated between men's and women's shoes, in order to provide the most supportive and precise fit possible in a production shoe.

HIGH-VOLUME FIT

Giro "HV" footwear is built on proprietary, cycling-specific lasts that are specially designed to create a fit that hugs wider or higher-volume feet closely without binding, crowding or discomfort. In order to provide the most supportive and precise fit possible, our HV lasts are hand-crafted in whole and half-sizes too, so you get the best fit possible in a production shoe. Giro HV fit is recommended for widths from D-EE, and is an option for feet with very high instep.

NEUTRAL PLATFORM

The term Neutral Platform means that there is no tilt or permanent adjustment built-in to our shoes. By maintaining a neutral platform, riders who require wedges or other adjustments are free to choose from a variety of systems that best meet their needs over time, without having to compensate for unnecessary or improper adjustments that can compromise the fit or performance of their shoes, or cause stress to muscles or joints.

SUPERNATURAL FIT SYSTEM

The Giro SuperNatural Fit System combines a cycling-specific footbed with an adjustable arch support kit. By simply choosing from any of the Low, Medium and High arch supports included in the kit, riders and fitters can independently adjust arch support to enhance fit and pedaling efficiency while reducing or eliminating common discomforts like hotspots, numbness and cramping. The system is available in men's and women's sizes, and incorporates X-Static® fibers in the footbed to fight odors and other bacteria.

CARBON FIBER

We use carbon fiber and carbon composites in Giro footwear because they provide exceptional performance that can be tuned to maximize stiffness, tensile strength, weight and form. While many companies utilize this cutting-edge material, we have the added advantage of having Easton® engineering expertise to further enhance the capabilities of this wonder material, allowing us to create thinner, lighter and stronger components.

SONIC WELDED ARMOR

Sonic welding is a process that uses sonic waves and pressure to fuse two elements together permanently. Utilizing this process to add a layer of armor to soft fabrics results in a more durable bond that is also cleaner and more accurate than traditional adhesives, and lighter too.

EASTON® ENGINEERED OUTSOLE PLATES

We worked closely with the engineering staff at Easton to develop proprietary outsoles that provide the most direct, powerful connection to the pedals without compromising comfort. Using advanced modeling and proprietary fixturing in our extensive test lab, every outsole is engineered to provide ideal stiffness in 3 zones: Toe, Arch, and Heel, while maintaining the lowest possible weight and stack-height (as low as 6.5mm). Additionally, the flatter edges of our outsoles allow the shoe upper material to conform to larger or wider feet (what we call the "spillover" effect) without uncomfortable pinching or binding.

MR-1 BUCKLE

The patent-pending MR-1 buckle is truly micro-adjustable in tension and release, allowing two-way adjustment in 2mm increments by simply pulling up to tighten the strap or depressing the lever to release it. It also features a quick macro-release for easy removal of the shoe. The design allows grit to be cleared easily for reliable function on- and off-road, and it has an exceptionally low stack height, reducing the likelihood of damage.

N-2 BUCKLE

The N-2 buckle is adjustable in 3mm increments to tension the strap, with a quick release by simply depressing the upper and lower levers simultaneously. The design allows grit to be cleared easily for reliable function on- and off-road, and it has a lower stack height than our previous buckle design. It offers two mounting positions and a guard that helps to prevent unwanted release of the buckle, and is compatible with our previous shoe designs should a rider need a replacement.

WOMEN'S SERIES

The Women's Series™ is a complete collection of fits, styles and prices that are uniquely tailored to female riders. Each Women's Series shoe is available with a level of detail that is unique within the line, and also features specific sizing and patterning in order to support the lower volume and narrower heel of a woman's foot. The one thing that isn't different is the level of performance since we use the same top-quality materials and technologies found in our premium men's shoes. All together, we believe the Women's Series offers a range of options that suit nearly any need, and with more compelling styles than competing brands.

EVOFIBER™

EvoFiber™ takes the best attributes of mesh and microfiber, and fuses them into a single fabric that repels water and improves breathability throughout the shoe. By eliminating the extra seams and adhesives required to insert mesh panels, the durability, comfort and weight of our shoes can all be dramatically improved. EvoFiber™ also holds shape exceptionally well, and is fast drying and easy to clean.

DUPONT®

For more than 200 years, DuPont has brought world-class science and engineering to innovative products, materials and services. DuPont nylon, including Zytel™ nylon, is a versatile performance material that can be tuned to meet a wide range of performance needs. It's tough, light and surprisingly resilient in a variety of conditions and environments, with excellent performance levels that are maintained much longer than traditional nylons.

AEGIS® MICROBE SHIELD

The Aegis Microbe Shield is an anti-microbial barrier that is permanently bonded with the fabric. It uses the power of a tiny positive electrical charge to inhibit the presence of odor-causing microbes that can cause odor, discoloring or fading, so your shoes stay fresh and odor-free.

X-STATIC® FIBERS

X-Static fibers are made with layers of pure silver that are permanently bonded to the surface of the fabric. Silver offers natural anti-microbial performance that helps to reduce odor and regulate heat, so your feet stay fresh and comfortable, naturally.

PORON® XRD™

Poron XRD is a soft, shock-absorbing material specifically engineered to absorb up to 90% of impact energy, without a loss of performance from repeated impacts. Using "intelligent molecules", Poron® XRD™ remains supple and flexible until impacted, when the molecules lock together immediately to deflect and help absorb shock. Other benefits include "open cell, breathable" performance with antifungal properties, and no latex, PVCs, VOCs, or heavy metals.

VIBRAM®

Vibram is the world leader in high performance rubber soles, with technologically advanced compounds like HydraGrip, the stickiest moldable compound in the Vibram arsenal and developed specifically for flat pedal riding in dry and wet conditions; and MegaGrip, a high performance sticky compound with significantly more durability and only a minimal decrease in friction compared to HydraGrip. All Vibram soles are produced with three objectives: to guarantee the best performance, the maximum level of comfort and quality over time.
