### GIRO CYCLING SHOES

2017 GIRO SPORT DESIGN

Factor Techlace Shoe

### REVOLUTION OF THE SPECIES

2017 GIRO CYCLING SHOES

The Factor Techlace<sup>™</sup> is a race-bred cycling shoe that couples the benefits of our Techlace system with the easy adjustability of a Boa dial, plus the performance you expect from Giro—all at an impressively low weight of 210 grams (size 42.5).

This extraordinary design is driven by our patentpending Techlace system, which couples the benefits of laces with the convenience of a strap for superb fit and easy adjustment on-the-fly. By replacing D-rings and other hardware with laces, the Techlace system provides a more supple feel across the forefoot. Plus, the laces can be easily replaced if damaged. In addition to the adjustability of two straps, we've partnered with Boa to achieve precise adjustment and a secure feel at the top of the instep with their premium IP1 dial. Boa's dial interface offers fast, intuitive adjustment in 1-millimeter increments when tightening or loosening.

ACE

Giro footwear is famous for fit and comfort, and the Factor Techlace is no exception. The upper is constructed with Evofiber SL, which is durable yet highly breathable. Inside the shoe, our SuperNatural Fit footbed features X-Static anti-microbial fiber plus adjustable arch supports to personalize fit, comfort and pedaling efficiency. Power transfer is bolstered by the Easton® EC90 SLX2 carbon fiber outsole, which is among the lightest, thinnest and stiffest pedaling platforms on the road, giving you a direct connection to the pedals.

When you put all of this together, you get the comfort of laces, the convenience of on-the-fly adjustability, and classic Giro fit and performance.

- Boa IP1 DIAL fast, intuitive adjustment in 1mm increments when tightening or loosening
- EASTON EC90 SLX2 OUTSOLE – among the lightest, thinnest and stiffest pedaling platforms on the road
- 3 **TECHLACE SYSTEM** replaces D-rings and other hardware with laces, providing a more supple feel across the forefoot, and the laces can be easily replaced if damaged
- SUPERNATURAL FIT FOOTBED
   adjustable arch supports to
  personalize fit and comfort
- 5 PREMIUM EVOFIBER SL UPPER supple, durable and highly breathable

### REVOLUTION OF THE SPECIES

## PERFORMANCE REIMAGINED

#### **COMING SOON**

Giro footwear has quickly become the leading choice of discerning riders worldwide because of our dedication to fit, performance and style. We're proud of the 2017 footwear line, but we couldn't help ourselves from tinkering to squeeze more performance out of our top-of-the-line road shoes.

By leveraging a host of materials that are completely new to cycling footwear, we not only improved performance and comfort, but also whittled weight down to a point we never imagined possible.

Stay tuned – these shoes will be worth the wait.

2017 GIRO CYCLING SHOES

# **TERRADURO MID**

# THE ULTIMATE ALL MOUNTAIN SHOE

The Terraduro<sup>™</sup> Mid takes the classic Terraduro platform and makes it even more capable for all mountain adventures and serious enduro racing—and it excels in even the wettest conditions. The midtop provides additional ankle support and coverage that inspires confidence when bombing through rock gardens or hiking rough trails. The breathable DWR treated Ariaprene<sup>™</sup> ankle scree cover moves with you to provide incredible comfort, and the laced closure allows you to get the perfect fit with seven points of adjustment. This shoe is highly water resistant with a lace shroud and a water sealed cleat opening. Built around a stout nylon shank, the Terraduro Mid pedals like a pure XC shoe but keeps you steady when scrambling over rocks and logs thanks to the grippy Vibram<sup>®</sup> rubber outsole.

### **APECKX II**

#### SLEEK STYLE WITH ELEVATED PERFORMANCE

The Apeckx™ II combines a supple bonded and welded mesh upper with an impressively stiff DuPont® Zytel™ sole. The welded and bonded upper results in fewer seams for reduced hot spots and improved comfort. Fit is adjustable via the classic combination of a micro-ratcheting, low-profile N-1 buckle and two straps. A supportive, anti-microbial EVA footbed optimizes comfort while reducing odor. Plus, the Apeckx II is built on the same last as our highest-performance shoes, so you get the same amazing fit that has made Giro the fastest-growing brand of cycling shoes.

### **APECKX II HV**

#### SLEEK STYLE AND ELEVATED PERFORMANCE FOR WIDE FEET

The Apeckx II HV offers the same style and performance as our standard Apeckx II, with fit and comfort tailored to high-volume and extra-wide feet. A supple microfiber upper is matched to an impressively stiff DuPont<sup>™</sup> Zytel<sup>®</sup> sole. The upper is welded and bonded, resulting in fewer seams for reduced hot spots and improved comfort. Our micro-ratcheting, low-profile N-1 buckle and two straps offer precise fit adjustment, while the anti-microbial footbed optimizes comfort and prevents odor. It's a great choice for riders who want a durable, comfortable shoe at a great price.

### CHAMBER

#### PROVEN ON THE DH WORLD CUP

Don't be fooled by the skate-inspired, street shoe look – the Chamber<sup>™</sup> is a pure performance race shoe packed with technical features. An SPD-compatible, dual-injected shank merges efficient pedaling with a flexible forefoot; an internal bootie secures the foot and keeps mud and other debris out, and the Vibram<sup>®</sup> rubber outsole provides grip and durability. Whether you're clipping in for a world championship race run or exploring your local singletrack, the Chamber is built to shred.

### JACKET

#### **GRIPPIN' AND SHREDDIN'**

The Jacket<sup>™</sup> transforms the flat pedal riding experience, thanks in part to the Vibram<sup>®</sup> MegaGrip<sup>™</sup> rubber outsole. This rubber compound was engineered for exceptional grip for trail riding, dirt jumping and downhilling. Other highlights include a low-profile upper, an EVA cushioning in the midsole (that helps to reduce shock) and a Poron<sup>®</sup> XRD<sup>™</sup> heel pad that helps minimize the impact of hard landings and bailouts. With a variety of on-point color options, these shoes are just as comfortable at happy hour in the Whistler Village as they are bombing down A-Line.

### **CARBIDE R**

#### **CORE MTB VALUES**

The Carbide™ R is an XC shoe with the comfortable, supportive fit found in our premium shoes, combined with a nylon and rubber co-molded outsole. This results in impressive durability, grip and traction in rocks and mud. The upper is made of supple synthetic leather with three wide straps that allow easy fit adjustments while a supportive EVA footbed enhances comfort. A stout injected nylon sole helps transfer power to the pedals instantly, enhancing your connection to the bike.

# GIRO WOMEN'S SHOES

2017 GIRO SPORT DESIGN

### **FACTRESS TECHLACE REVOLUTION OF THE SPECIES**

#### The Factress™ Techlace™ is our lightest weight women's road shoe, featuring a revolutionary closure system that couples the benefits of laces with the convenience of a dial. The Techlace system replaces D-rings and other hardware with laces, providing a more supple feel across the forefoot, and the laces can be easily replaced if damaged. The Boa IP1 dial offers fast, intuitive adjustment in 1mm increments when tightening or loosening. The Factress Techlace has all the performance you'd expect from Giro: The upper is constructed with Evofiber SL, which is durable yet highly breathable. Inside the shoe, our SuperNatural Fit footbed features adjustable arch supports to personalize fit, comfort and pedaling efficiency. Power transfer is bolstered by the Easton® EC90 SLX2 carbon fiber outsole, which is among the lightest, thinnest and stiffest pedaling platforms

on the road, giving you a direct connection to the pedals.

### **SOLARA II**

#### PREMIUM STYLE AND COMFORT, WITHOUT A PREMIUM PRICE

The Solara<sup>™</sup> II is built with the same comfortable fit as our premium shoes, thanks to a supple upper and a micro-ratcheting, low-profile buckle that offers precise fit adjustment. The upper is now welded and bonded, resulting in fewer seams for reduced hot spots and improved comfort. A supportive EVA footbed with Aegis® anti-microbial treatment is matched with our stiff DuPont® Zytel™ nylon outsole to create an efficient, powerful platform for transferring energy to the pedals. It's a great choice for enthusiasts or recreational riders who are on the road to becoming dedicated cyclists.

### MANTA R

### OUR CLASSIC WOMEN'S TRAIL SHOE WITH A RUBBER OUTSOLE

The Manta<sup>™</sup> R features a nylon and rubber co-molded outsole for exceptional durability and improved grip on rocks or roots. The reinforced toe box boasts a rubber toe-guard for improved durability yet comfort reigns supreme with a supple microfiber upper two straps and a micro-ratcheting buckle. Those features, combined with the stiff and efficient nylon outsole, create a shoe that rivals the performance of more expensive composite designs. Other highlights include aggressive lugs for improved traction, toe spike compatibility and a supportive EVA footbed with Aegis<sup>®</sup> anti-microbial treatment.

#### PRECISION FIT

Giro footwear is built on proprietary cycling-specific lasts to create a fit that hugs the foot closely without binding, crowding or discomfort. Our lasts are hand-crafted specifically for cycling footwear in whole and half-sizes that are differentiated between men's and women's shoes, in order to provide the most supportive and precise fit possible in a production shoe.

#### HIGH-VOLUME FIT

Giro "HV" footwear is built on proprietary, cycling-specific lasts that are specially designed to create a fit that hugs wider or higher-volume feet closely without binding, crowding or discomfort. In order to provide the most supportive and precise fit possible, our HV lasts are hand-crafted in whole and half-sizes too, so you get the best fit possible in a production shoe. Giro HV fit is recommended for widths from D-EE, and is an option for feet with very high instep.

#### NEUTRAL PLATFORM

The term Neutral Platform means that there is no tilt or permanent adjustment built-in to our shoes. By maintaining a neutral platform, riders who require wedges or other adjustments are free to choose from a variety of systems that best meet their needs over time, without having to compensate for unnecessary or improper adjustments that can compromise the fit or performance of their shoes, or cause stress to muscles or joints.

#### SUPERNATURAL FIT SYSTEM

The Giro SuperNatural Fit System combines a cycling-specific footbed with an adjustable arch support kit. By simply choosing from any of the Low, Medium and High arch supports included in the kit, riders and fitters can independently adjust arch support to enhance fit and pedaling efficiency while reducing or eliminating common discomforts like hotspots, numbness and cramping. The system is available in men's and women's sizes, and incorporates X-Static® fibers in the footbed to fight odors and other bacteria.

#### SONIC WELDED ARMOR

Sonic welding is a process that uses sonic waves and pressure to fuse two elements together permanently. Utilizing this process to add a layer of armor to soft fabrics results in a more durable bond that is also cleaner and more accurate than traditional adhesives, and lighter too.

#### EASTON® ENGINEERED OUTSOLE PLATES

We worked closely with the engineering staff at Easton to develop proprietary outsoles that provide the most direct, powerful connection to the pedals without compromising comfort. Using advanced modeling and proprietary fixturing in our extensive test lab, every outsole is engineered to provide ideal stiffness in 3 zones: Toe, Arch, and Heel, while maintaining the lowest possible weight and stack-height (as low as 6.5mm). Additionally, the flatter edges of our outsoles allow the shoe upper material to conform to larger or wider feet (what we call the "spillover" effect) without uncomfortable pinching or binding.

#### WOMEN'S SERIES

The Women's Series ™ is a complete collection of fits, styles and prices that are uniquely tailored to female riders. Each Women's Series shoe is available with a level of detail that is unique within the line, and also features specific sizing and patterning in order to support the lower volume and narrower heel of a woman's foot. The one thing that isn't different is the level of performance since we use the same top-quality materials and technologies found in our premium men's shoes. All together, we believe the Women's Series offers a range of options that suit nearly any need, and with more compelling styles than competing brands.

N-1

#### N-1 BUCKLE

The N-1 buckle is adjustable in 3mm increments to tension the strap, with a quick release by simply depressing the lower lever. The design allows grit to be cleared easily for reliable function on- and off-road. It offers two mounting positions and a guard that helps to prevent unwanted release of the buckle, and is compatible with our previous shoe designs should a rider need a replacement.

#### BOA® DIAL

Boa dial systems provide fast, easy adjustability with the turn of a dial. The proprietary combination of a cable lace with nylon guides and a mechanical reel eliminates stretch, reduces weight and provides a finer adjustment (1mm increments) compared to traditional buckles, and it offers an instant "macro release" function too. Boa buckles are covered under a lifetime warranty against defects.

#### TECHLACE™ SYSTEM

The Techlace™ system is an extraordinary patent-pending design that couples the benefits of laces with the convenience of a strap for superb fit and easy adjustment on-the-fly. By replacing D-rings and other hardware with laces, the Techlace system provides a more supple feel across the forefoot. Plus, the laces can be easily replaced if damaged.

#### **EVOFIBER**<sup>™</sup>

Evofiber TM takes the best attributes of mesh and microfiber, and fuses them into a single fabric that repels water and improves breathability throughout the shoe. By eliminating the extra seams and adhesives required to insert mesh panels, the durability, comfort and weight of our shoes can all be dramatically improved. Evofiber <sup>™</sup> also holds shape exceptionally well, and is fast drying and easy to clean.

#### **DUPONT®**

For more than 200 years, DuPont has brought world-class science and engineering to innovative products, materials and services. DuPont nylon, including Zytel<sup>™</sup> nylon, is a versatile performance material that can be tuned to meet a wide range of performance needs. It's tough, light and surprisingly resilient in a variety of conditions and environments, with excellent performance levels that are maintained much longer than traditional nylons.

#### AEGIS<sup>®</sup> MICROBE SHIELD

The Aegis Microbe Shield is an anti-microbial barrier that is permanently bonded with the fabric. It uses the power of a tiny positive electrical charge to inhibit the presence of odor-causing microbes that can cause odor, discoloring or fading, so your shoes stay fresh and odor-free.

### -slalic

X-STATIC<sup>®</sup> FIBERS X-Static fibers are made with layers of pure silver that are permanently bonded to the surface of the fabric. Silver offers natural anti-microbial performance that helps to reduce odor and regulate heat, so your feet stay fresh and comfortable, naturally.

#### PORON<sup>®</sup> XRD<sup>™</sup>

Poron XRD is a soft, shock-absorbing material specifically engineered to absorb up to 90% of impact energy, without a loss of performance from repeated impacts. Using "intelligent molecules", Poron® XRD™ remains supple and flexible until impacted, when the molecules lock together immediately to deflect and help absorb shock. Other benefits include "open cell, breathable" performance with antifungal properties, and no latex, PVCs, VOCs, or heavy metals.

#### **VIBRAM®**

Vibram is the world leader in high performance rubber soles, with technologically advanced compounds like HydraGrip, the stickiest moldable compound in the Vibram arsenal and developed specifically for flat pedal riding in dry and wet conditions; and MegaGrip, a high performance sticky compound with significantly more durability and only a minimal decrease in friction compared to HydraGrip. All Vibram soles are produced with three objectives: to guarantee the best performance, the maximum level of comfort and quality over time.
