A passion for cycling
Inspired by excellence
You must feel Tacx

Race

A top cyclist such as Tom Boonen lays the foundation of his top form on the Tacx trainer. Mountainbikers, cyclo-crossers, track cyclists and triathletes also train and work on their fitness level on 'the Tacx'. The same goes for speedskaters, skiers and race drivers; cycling is an essential part of their fitness training too. It doesn't matter what kind of sports you do, the Tacx trainer fits everyone. Including you.

Play the leading role in your own race...

i-Genius Virtual Reality trainers

With the i-Genius cycling becomes a celebration. This top trainer offers unlimited entertainment and makes an indoor training a real pleasure. What is so attractive about the VR trainers is that not only is the race displayed on the monitor of your PC, but true-to-life signals are transmitted to your bike. On a climb you will feel the gradient through the rear wheel and downhill it is just as if you had wings. The i-Genius includes the Tacx Trainer software 4, Advanced. With this ultra modern software you enter virtual worlds which are even more real than real while riding on your Tacx trainer. You can't tell the world on your screen apart anymore from the real world. Once you have been overwhelmed, you never want to go back.

The most exciting races

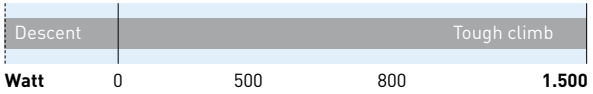

Cycling on the i-Genius gives you the lifelike sensation of riding the most exciting races at home, amidst your virtual opponents. You can compete on very diverse terrains, such as a criterium race in an American metropolis. The enthusiastic audience cheers you on and you can feel the already covered kilometres in your legs when you get ready for the final sprint.

PowerBack

The i-Genius features PowerBack. This system converts the heat that is generated in the brake and released during the ride, into electricity that is then fed back into the power grid. This means that you are generating your own electricity.

Brake resistance adjustable in percent

i-Genius Multiplayer

i-Genius

BlackTrack

i-Genius Multiplayer T2000
i-Genius T2020

The i-Genius, Tacx's top model, is unique. The combination of the sturdy frame and the Tacx Trainer software 4, Advanced makes riding through the virtual worlds a real sensation. The i-Genius has a wireless motor brake with a computer-driven flywheel that generates high powers at low speeds. This makes the climbing of hills and mountains even more realistic. The i-Genius even features downhill drive. LED lights in the brake indicate the cycling speed and the power output. The communication between brake, VR interface and PC is wireless; the trainer itself has to be plugged into an electric point. The i-Genius Multiplayer includes the BlackTrack steering frame and a 1 year license for web racing; the i-Genius includes the Skyliner front wheel support.

Tacx Trainer software 4, Advanced

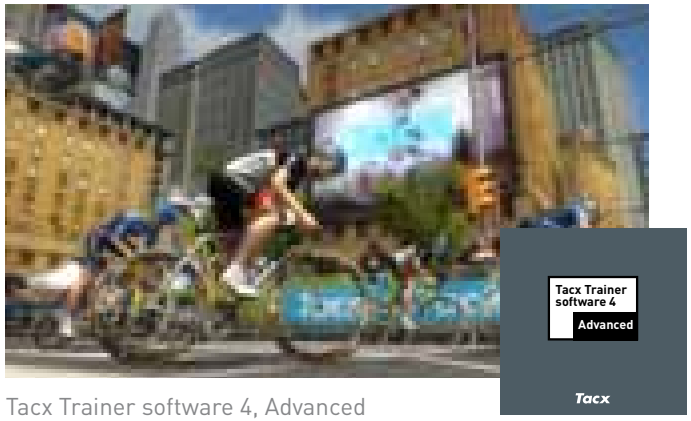

- Very advanced software with unlimited possibilities
- 4 computer-animated Virtual Reality terrains
- 2 criterium races and velodrome with gameplay against virtual opponents
- Catalyst training programs with 3D display
- Films of well-known races (optional)

Software licenses

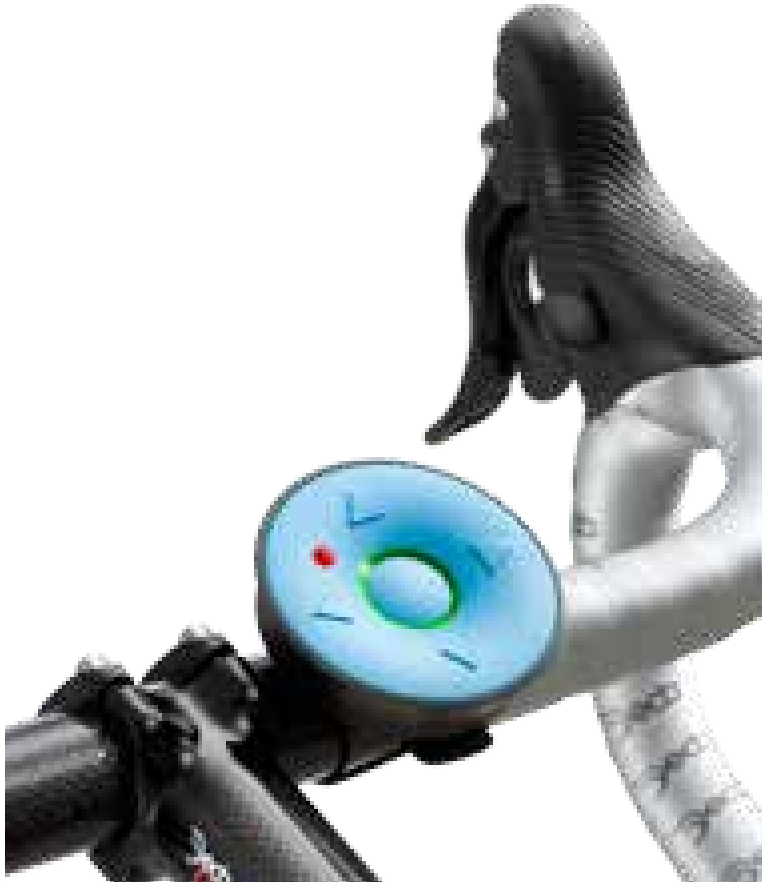

- Web racing 1 year (only with i-Genius Multiplayer)
- GPS routes through Google Earth (optional)

BlackTrack T2420

This stylish, collapsible steering frame is very user-friendly and compact. The bicycle's front wheel is put into a turnable plate, which makes the steering feel very realistic. Thanks to ANT+ communication with the PC is wireless. Rubber at the bottom side prevents the rider from moving and muffles noise.

Tacx Trainer software 4, Advanced

Get immersed... Tacx Virtual Reality

Tacx Trainer software 4 Advanced

Tacx is a pioneer in cycling through virtual worlds and has reached a new milestone in the development of Virtual Reality. For years we have worked very hard to create unique software with which the virtual world cannot be told apart anymore from the real world. Completely new terrains have been designed, including roads with altitude differences, gradient percentages and curves. 3D buildings and trees give every terrain its own character. Lighting creates the right atmosphere and recognizable sound makes the VR world complete. The result? The Tacx Trainer software 4, overwhelming entertainment like it's never been before.

Realistic gameplay

In the VR terrains you can enjoy lifelike interaction with riders, cars and other elements in the virtual worlds. You battle against intelligent opponents with a very realistic way of riding; they can jump away and challenge you, for example. You never know what is going to happen, just like in a real race. This makes the experience even more realistic – and addictive.

In the Tacx Trainer software 4 you can also use Catalyst, professional programs to analyze your training session in detail. With the Tacx films you can ride the world's most famous races. And if you want to repeat your outdoor routes, you can import these rides in the Tacx software through GPS and relive them again indoors.

Tacx Trainer software 4, Advanced T1990.04

All VR riders can order the Tacx Trainer software 4, Advanced through our web shop; the DVD can also be purchased in the cycle shops. Updates will be published on a regular base, which you can download for free.

Training screen during cycling

Recommended system requirements: Processor P4, Double core 2.5 Ghz, **Memory** 3GB (X86), 4GB (X64) DDRIII, **Free disk space** 2 GB, **Video card** DirectX10 compatible 3D with 512 MB of memory (not shared memory) brand: ATI or Nvidia, **Resolution** 1920 x 1080, **Sound card** DirectSound compatible, Various 1 free USB port, DVD player, **Operating system** Windows 7.

Virtual Reality

Various animated terrains for mountainbike, race and track with virtual 3D riders. Climbing and descending, ski-jumps, tunnels and sensationally sharp turns, there is something for everyone. The Tacx Trainer software 4 outshines because of the beautifully designed VR terrains: Montagna (mountainous terrain in Italy), Valeggio (sloping terrain in Italy plus criterium race in an Italian village), Downhill Valley (overwhelming nature experience in America) and US Metropolitan (criterium race in an American city). Be overwhelmed by the Tacx Trainer software 4 and enter virtual worlds while cycling.

Virtuele 3D riders

Never before have the virtual riders looked this good, sharp and lifelike as in the Tacx Trainer software 4. The riders, the men as well as the women, are now shaped even better and the movements they make, are more realistic than they have ever been. You can choose from the most modern bicycles and outfits, which you can personalize. Even the rider's skin and hair colour can be adjusted.

Catalyst & Catalyst 3D

Professional training programs and fitness tests for a scientific analysis of your training session. Train on heart rate, power output, speed or cadence. Follow your development and become a better rider step by step.

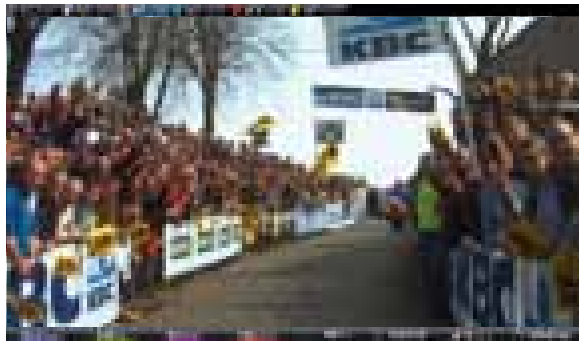

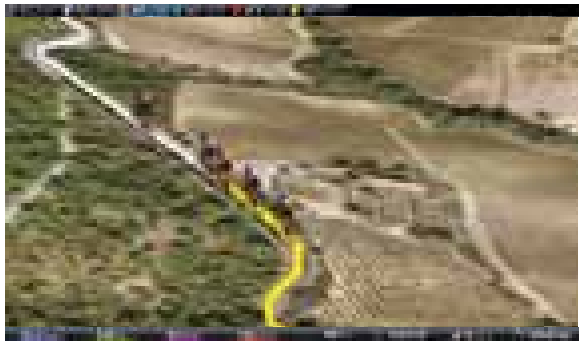

Tacx Films

You can choose from many films of legendary stages and cycling classics (optional). The Tour of Flanders, the Amstel Gold Race and the Tour de France climbs come to life on your screen. Between the Madonna del Ghisallo and the Cauberg lie almost a thousand kilometres, but Tacx makes it possible to conquer these legendary hills on one and the same night at home.

Training with the pros

Become one with the professionals, learn from the famous riders and follow them to improve your cycling technique. Train together with Tom Boonen and his Quick Step team in Spain or join the Astana training camp.

> You can find all film titles on page 35

GPS Rides

Real Life Training. With GPS everything is possible. Geographical data and 3D maps by Google Earth make it possible to relive your outdoor training ride completely at home. Lifelike, but without the disadvantages of outdoor cycling. No rain, no cold.

Ride outdoors, relive indoors

You can easily import your data in the Tacx software. You can also create routes yourself through the route planner. In the view settings you select Google satellite or Google Street View. Your progress, and that of your opponents, is being displayed visually.

Google license, 1 year T1990.75
You need a license to be able to use these functionalities.

Multiplayer

Multiplayer enables you to race real-time against real opponents, anywhere in the world. Famous mountains can be climbed with various riders at the same time. Take up the challenge and lose yourself in an interactive race on one square metre. Contacts are made through the Tacx site.

Races through Tacx website

Tacx organizes many races through its own server on the Tacx site. To join the web racing you need a license. When you buy the i-Genius Multiplayer you receive a license for a year. The other trainers give you a trial period of four weeks.

Multiplayer license, 1 year T1990.50
A Multiplayer license can be bought in the cycle shops or the Tacx web shop. For a period of 1 year or 6 months.

Feel the power of Bushido, everywhere...

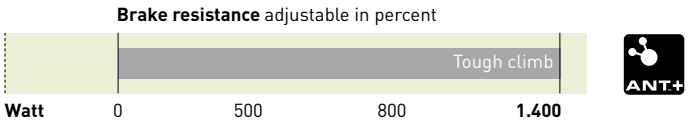

Bushido Ergotrainer

The Bushido is Tacx's most advanced ergotrainer. This technically revolutionary design once more makes clear why Tacx is market leader when it comes to trainers. The Bushido is completely wireless, you don't even need to plug it into an electric point. This allows fanatical cyclists to ride wherever they want, indoors and outdoors. Thanks to the Bushido demanding riders can train at high level and with scientific precision. That is why it is the favourite ergotrainer of the pro riders, who only want the best of the best.

Triathletes, mountainbikers and cyclists...

The Bushido is also very popular among other athletes. Triathletes use it intensely to prepare themselves for the highlights of their season, such as the Ironman in Hawaii. And mountainbikers simulate the steep climbs in the wild nature through the Bushido. Every fanatical athlete who wants to measure his own progress in a professional way, eventually falls for the Bushido. The ergotrainer can also be combined with external power meters from other brands, as long as they work with the wireless ANT+ technology.

Bushido

Bushido T1980

The wireless Bushido has a powerful brake system which offers a maximum resistance of 1400 Watt. The system, that is fully incorporated in the housing, consists of a motor brake and a 2 kg computer-driven flywheel. This helps you to obtain a supple pedal stroke on steep climbs. The brake features a series of LED lights. The red lights light up when the power output is high; when the power output is low, the green lights are more visible. The lights move on the rhythm of your cadence. The balance indicator on the display helps you to find the balance in power during cycling, in order to reach a steady and efficient pedal stroke.

To measure is to know

The Bushido has more to offer. The handlebar computer shows, through its graphical display, all the necessary training information, such as power output, heart rate, cadence, speed and time. The user-friendly Bushido menus allow you to start immediately. 99 Catalyst training programs for slope (-5 to +20%), power output or heart rate can be set in advance.

Tacx Trainer software 4, Advanced

Upgrade i-Bushido T1990

This set consists of the Tacx Trainer software 4, Advanced and an ANT+ USB II dongle, with which you can connect the Bushido wirelessly with the PC. This gives your trainer the same possibilities as the Tacx Virtual Reality trainers. For more information about the software, see page 10.

Feel the power of Bushido, everywhere...

ANT+ dongle T2091

With this handy dongle, that works with the wireless ANT+ technology, the Bushido ergotrainer can be connected with an iPad. The big advantage for the Bushido rider is that he doesn't need an Upgrade i-Bushido anymore, nor a PC or laptop, to be able to use the Virtual Reality functions. With the iPad instead of the Bushido computer on the handlebar you are completely wireless; you can even train in the mountains, far away from everything and everyone. Extra advantage is that the screen is much larger.

Suitable for iPad: i-Genius, Bushido and i-Vortex

Thanks to the ANT+ dongle Apple users can now also enter Tacx Virtual Reality. Together with the Bushido, the i-Genius and the i-Vortex VR trainers are iPad compatible as well. These are not completely wireless, the trainers themselves need to be plugged into an electric point. But they do offer unlimited possibilities through the iPad. The ANT+ dongle (from Wahoo) can be bought separately in the shops, after which you can purchase the Tacx applications in the Apple Store for a small fee and install them on your iPad. Then you can start immediately.

Tacx iOS applications

There will be separate apps for, among others, VR, Catalyst, Real Life Video and GPS Rides with Google. These won't be available all at the same time. As soon as an application is ready, it will be launched.

www.applestore.com

Push your limits...

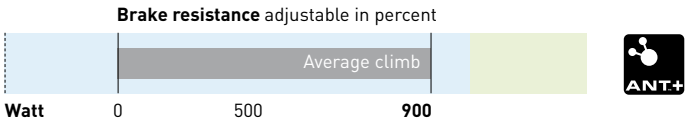

i-Vortex Virtual Reality/ergotrainer

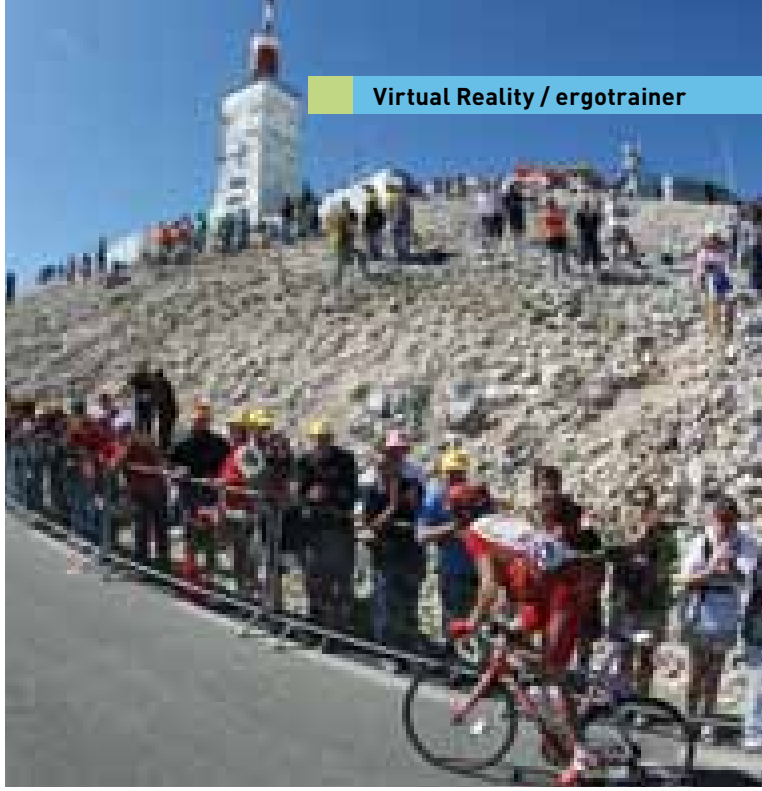

Exploring the Mont Ventoux together with your training mate, inside near the fireplace? You can do it with the i-Vortex, the first Tacx trainer that is a VR and ergotrainer in one. This means that you can connect the trainer with the PC, to add more entertainment to your sessions, and that you can also use it stand-alone for serious and concentrated training. Re-riding famous routes through the Tacx films, such as the lifelike ascent of the Mont Ventoux, is one of the many possibilities you can benefit from. The i-Vortex is a unique total package.

For the fanatical cyclist

The i-Vortex connections are being established through the reliable, wireless ANT+ system. You do need an electric point nearby to plug in the power cable. The i-Vortex differs from the i-Genius when it comes to brake working; it has less power during climbing and doesn't feature downhill drive. But like the i-Genius, the i-Vortex also includes the Tacx Trainer software 4, Advanced, the best of the best for the fanatical cyclist.

i-Vortex

i-Vortex T2160

The i-Vortex is the perfect option for enthusiastic cyclists who want to prepare themselves at home for big tours or races. Easy to use, everybody can start at once. This cool trainer features a white frame and a handlebar computer with a display that makes all relevant training data visible at a glance. The handlebar computer doesn't have a memory; you set programs for slope, power or heart rate manually while training. The ANT+ dongle guarantees wireless communication between the i-Vortex and the PC. Like the i-Genius, the i-Vortex works with the Tacx Trainer software 4, Advanced, the most elaborate version.

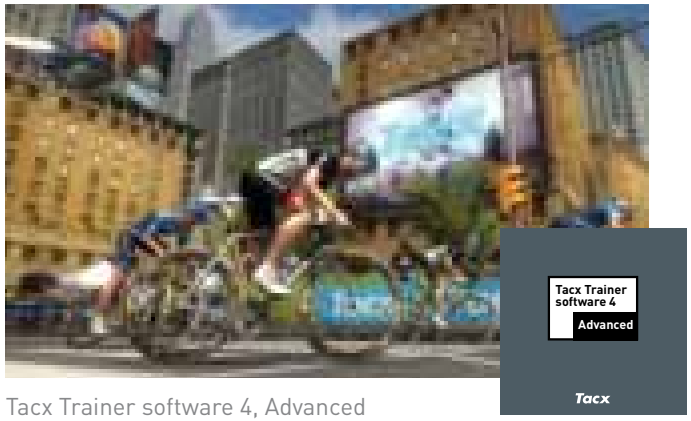

The i-Vortex electro brake consists of 8 magnets and a 2 kg flywheel. The maximum resistance is 950 Watt. The system is wireless, there is no cable running anymore between the brake and the handlebar computer. A cadence sensor is no longer needed either, although power is. The i-Vortex includes the Skyliner front wheel support. The manoeuvrable BlackTrack steering frame also fits perfectly and is available optionally.

Tacx Trainer software 4, Advanced

- Very advanced software with unlimited possibilities
- 4 computer-driven Virtual Reality terrains
- 2 criterium races and velodrome with gameplay against virtual opponents
- Catalyst training programs with 3D display
- Films of well-known races (optional)

Software licenses

- Multiplayer web racing 1 year or ½ year (optional)
- GPS Rides through Google Earth (optional)

Tacx Trainer software 4, Advanced

Experience the magic of Tacx...

i-Flow Virtual Reality trainer

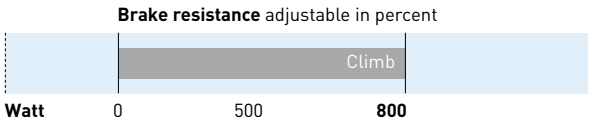

The magic of cycling in Tacx's virtual worlds can be experienced everywhere, even at the highest floor in a big city. Tacx Virtual Reality is so overwhelming that it grabs you and leaves you addicted to indoor cycling. A VR trainer such as the i-Flow is perfect for cyclists who want to be entertained while training and enjoy unlimited entertainment. You can climb famous mountains yourself and re-ride legendary cycling classics. The route is being displayed on the screen of your PC.

Virtual Reality for everyone

The i-Flow is the entry-level Tacx VR trainer. It includes the VR steering frame and the Tacx Trainer software 4, Basic. This version is a little less elaborate than the Advanced one, but still offers many possibilities and is a feast for the eyes. You can cycle through brand new VR terrains and afterwards analyze your performance extensively with Catalyst.

A great recommendation for i-Flow users is a Multiplayer license for half a year or a year. With this license you can race against other Tacx riders through the Tacx server.

> www.tacx.com

i-Flow

Tacx Trainer software 4, Basic

i-Flow T2250

Thanks to its excellent value for money the i-Flow makes training in Tacx's virtual worlds accessible to everyone. This popular trainer with ergonomically shaped frame slightly rebounds while cycling. It is operated through the handlebar interface. The i-Flow includes the basic version of the Tacx Trainer software 4, with its many upgrade possibilities, and the manoeuvrable VR steering frame. With this steering frame you can optimally experience the interactive game element; every movement is immediately visible on the screen and you have the freedom to decide where you want to ride.

The i-Flow has an electro-magnetic brake. It is less powerful than the motor brake – the wheel is not being driven – but does guarantee a very realistic cycling experience. You can really feel the rolling, air and incline resistances which you encounter while cycling, you immediately notice whether you are riding on a paved road, a wood path, through the sand or on the grass. The brake system consists of 6 magnets and a 2 kg flywheel. The maximum resistance is 800 Watt.

Tacx Trainer software 4, Basic

- 2 computer-animated Virtual Reality terrains
- Catalyst training programs
- Realistic films of well-known races (optional)

Software licences

- Upgrade to Advanced version (optional)
- Multiplayer web racing 1 year or ½ year (optional)
- GPS Rides through Google Earth (optional)

Tacx Trainer software 4, Basic

Train yourself fit...

Flow Ergotrainer

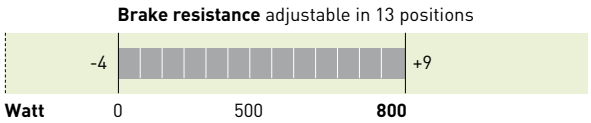

It's not always possible to leave the house for a long training ride. With the Tacx Flow you can improve your fitness at home, it is a good investment that will always pay dividends in the end. After all, you are investing in your own capability, because you become better and better thanks to the ergotrainer. The Flow guarantees a highly efficient training method. It is said that one hour on the trainer produces the same result as three hours of training outdoors. It is therefore the ideal resource for people who don't have a lot of time but still want to train in a professional manner. And because we know that life is expensive, especially in the big city, the Flow is very well priced.

User-friendly trainer

The Flow is user-friendly, after work you can jump on the trainer immediately and enjoy an hour's ride. You don't have to be a training freak, but thanks to the ergotrainer you do have access to essential training parameters such as speed, cadence, power output and heart rate. Because the Flow is accessible to everyone and has so much to offer, it has been on top for years now.

And if your budget is willing and you are looking for even more adventure, you can always change your Flow into a Virtual Reality trainer with the special upgrade set.

Flow

Flow T2200

The Flow is one of Tacx's most popular trainers. This entry-level ergotrainer, with a frame that rebounds slightly while you ride, is excellent value for money and very easy to use for everyone. Heart rate, power output, speed and pedalling frequency are being measured and visualized on the handlebar computer's display. These four training parameters are the most important tools that will help you towards focused and efficient work-out routines and optimum performance. During training you can adapt the program for power or slope resistance. The electro-magnetic brake is managed through the handlebar computer. The Flow includes the Skyliner front wheel support.

Change your Flow into a VR trainer

Another great advantage of the Flow ergotrainer is that you can turn it into a Virtual Reality trainer with the special upgrade set. You will then have a VR trainer with unlimited possibilities and at the same time keep a quality stand-alone ergotrainer.

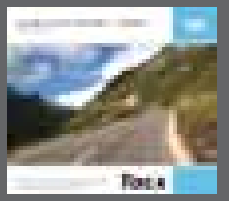

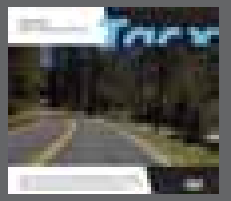

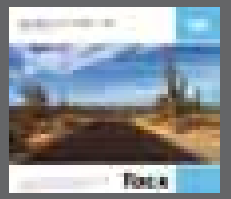

Tacx Trainer software 4, Basic

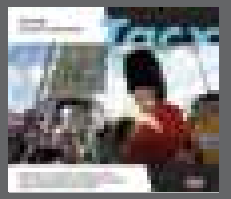

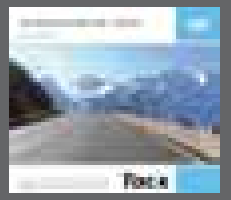

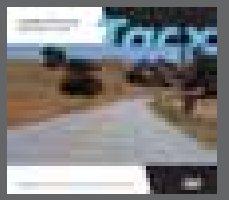

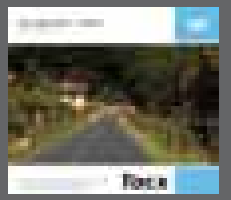

Upgrade i-Flow T1925

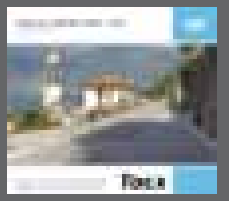

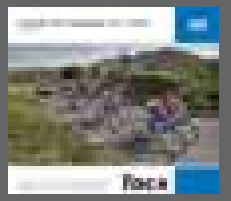

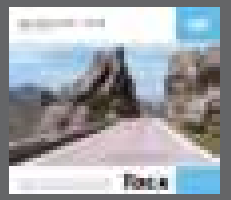

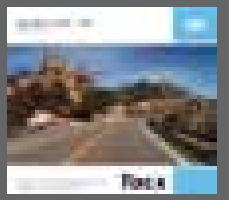

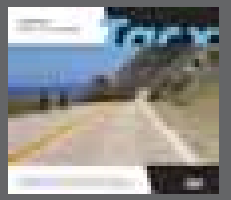

This set, with which you upgrade the Flow to an i-Flow, consists of an interface that replaces the Flow handlebar computer and the Tacx Trainer software 4, Basic. For more information about the software, see page 29.

Tacx Films

Tacx has already published many different films for the Tacx Virtual Reality trainers and there are more to come. The films are divided into various categories. All films contain GPS data being displayed on 3D maps by Google Earth.

The speed of the film is influenced by the cycling pace. If you are cycling up a mountain, the brake will give so much resistance that you can actually sense the percentage of incline. Cycling in a Tacx film makes the training session much more enjoyable and even adventurous.

Tacx films also for cycletrainers
The Tacx Video Player is a free program that can be downloaded from the Tacx website. This software makes the complete collection of Tacx films compatible with a Tacx cycletrainer, ergotrainer and/or fitnessbike from other brands. While cycling, a bar chart in the film shows you in which position you best climb or descend. You can change the resistance position manually through the resistance lever on the handlebar or the handlebar computer.

Give yourself a boost!

Booster & Satori Cycletrainers

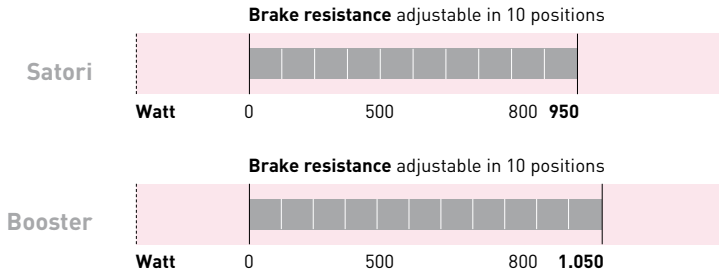

Tacxing has become a household term for cyclists all over the world. Specific training sessions, which you can also complete indoors when the weather is bad, make it possible to prepare optimally for a race. The Tacx cycletrainer also is the ideal alternative for a good power and fitness training program during the winter months. 'The Tacx', the training mate of pros, amateurs and recreational riders, is always there, so one can keep on training.

Professional tacxing

The best pro riders cannot live without their Tacx cycletrainer either. They use it during the warming-up for races and time-trials. The robust frame stands its ground anywhere and has been designed to withstand incredible forces. This is exactly what you need shortly before the start of your race. The super powerful Booster is the absolute top model of the Tacx Pro Teams.

The Tacx Booster is the official warming-up trainer
at the Olympic Games and the UCI World Championships.

> www.tacx.com

Booster

Satori

The choice of the pros

Booster T2500

Give yourself a boost with the Tacx Booster. This sturdy cycletrainer creates pure power. Thanks to its advanced magnetic brake the Booster generates very high powers at low speeds. The integrated brake system consists of 8 permanent magnets with a 2 kg flywheel and can reach a maximum resistance of no less than 1050 Watt. The Booster is easy to assemble and also safe, because the brake has been built in to prevent the rider from contact with the hot flywheel. The Booster is the new number 1 cycletrainer of the pros for their warming-up and training sessions. But of course this popular cycletrainer is also available to all the other riders that enjoy tacxing.

Satori T1856

For many years the sky-blue Satori has been the trusted warming-up trainer of the pros. The brake system consists of a powerful Neodymium magnet and an extra large steel flywheel of 1,6 kg. At low pedalling frequencies the trainer can generate very high powers. It is for instance possible to generate 400 Watt at the fairly low speed of 27 km/h (17 m/h). The maximum resistance is 950 Watt.

Video Player

With the free Video Player software you can play all Tacx films without your cycletrainer being connected to a PC. You can choose from many films of legendary stages and cycling classics. The Tour of Flanders and the Tour de France climbs come to life on your screen. Check out our complete collection on page 35.

Let the Blue seduce you...

Blue Cycletrainers

Tacx proudly presents the Blue, the new generation of cycletrainers for the general public. The Blue Motion, Matic and Twist are the long-expected successors of the Cycletrack, Tacx's first model ever that has been very popular for decades thanks to its excellent value for money. The same can be expected of the Blue, because you get more for less: a powerful brake that manages the resistance and a robust frame with solid back legs. Tacx's many years of experience have resulted in the design of this stable construction that can withstand all forces.

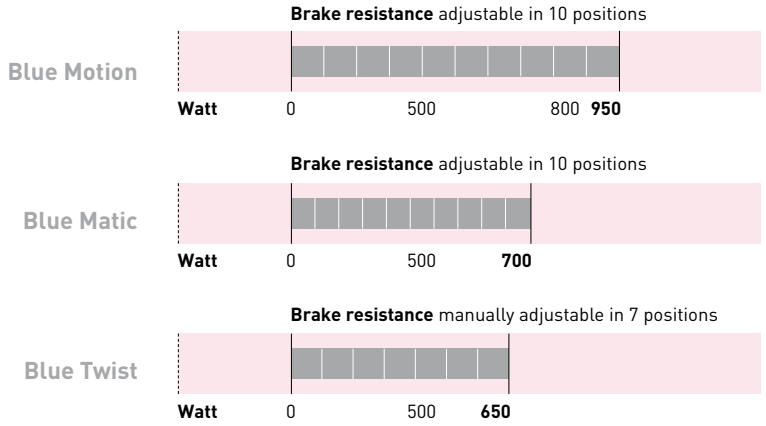

Everyone can tacx

The Blue is suitable for everyone, whether you cycle a lot or just every now and then. A quick half an hour's ride before dinner? With the Blue you can start immediately. The trainer has a simplified mounting system, which makes it easy and quick to assemble. A tool set for small and big wheels is no longer needed; even 29 MTB wheels do fit.

Blue Motion

Blue Matic

Blue Twist

Blue Motion T2600

The top model of the Blue cycletrainers. The Blue Motion features the same brake system as the Satori. The powerful Neodymium magnet, the extra large steel flywheel of 1,6 kg and the 10 position handlebar resistance lever allow for very high powers at low pedalling frequencies. The maximum resistance is 950 Watt.

Blue Matic T2650

The Blue Matic's magnetic brake consists of two discs with six permanent magnets each. With the 10 position handlebar resistance lever you can change the position of the magnets in the brake unit in relation to each other. While training the resistance increases when you cycle faster and/or in a heavier mode. The maximum resistance is 700 Watt.

Blue Twist T2675

Very well priced cycletrainer. Features the same brake system as the Blue Matic, but doesn't include the handlebar resistance lever. You can set the resistance in 7 positions with a button on the magnetic brake. The maximum resistance is 650 Watt.

Make your training complete...

Trainer accessories

The trainer set-up of the professional teams is taken care of down to the finest details: a trainer mat to dampen the sound, a sweat cover to protect the bike from moisture and a rear tyre that has been developed for riding on a VR, ergo- or cycletrainer. The pros don't leave anything to chance. Follow their example and make your work-out complete. Many accessories are available which form a perfect combination in colour and design. From a handy transport bag and a front wheel support to an advanced ANT+ heart rate belt, steering frames for the VR trainers and an adapter for the steering console, Tacx has it all.

Tacx trainer tyres

Specially developed for riding on a hometrainer. The rubber compound minimizes overheating, slippage and wear. The Tacx trainer tyre is more silent than standard bicycle tyres. The trainer tyres are not suitable for outdoor cycling.

MTB, 26x1.25 T1395

MTB, 28x1.25 (29er) T1397

BlackTrack T2420

VR steering frame T1905

BlackTrack & VR steering frame

Accessories for the Virtual Reality trainers. Every steering manoeuvre is immediately visible on the screen of your PC and you have the freedom to decide where you want to ride. The collapsible BlackTrack is an option for the i-Genius, i-Vortex and Bushido; the VR steering frame for the Flow.

Skyliner

A specific accessory for the Blue trainers. The front wheel support encourages a natural cycling posture, raises the front wheel and corrects the position of the bicycle.

Skyliner T2590

Trainermat T1370

Sweat cover T1365

Quick release T1402
Axle nuts M10x1 T1415 **3/8** T1416

Trainer mat & sweat cover

These should be part of every training session. The trainer mat protects the floor surface and dampens sound. The sweat cover protects the bicycle from moisture and corrosion during intensive work-outs.

Trainerbag i-Genius, Bushido, i-Vortex, Booster & Blue T1996

Trainerbag Satori T1375

Trainerbag Flow T1380

Trainer bags

The bag, which features a double inner layer and inside compartments for accessories, offers optimum protection to the Tacx trainer during transport. This solid bag also comes in handy for storing the trainer when it's not being used.

ANT+ heart rate belt

The i-Genius, Bushido and i-Vortex work with the wireless ANT+ protocol. With the Tacx ANT+ heart rate belt you are assured of an interference-free reception and a range up to 5 metres.

Ride like the stars...

Galaxia & Antares Rollers

The Galaxia and Antares are Tacx's contribution to the popularity of track racing. Many world champions don't go anywhere without their Tacx rollers. During their warming-up and training sessions they use the rollers to maintain their speed and suppleness, essential tools for a track cyclist. The Tacx rollers have a state of the art design. Thanks to the conical rollers your ride is extra stable, so you can focus even more on your goals in training: improving your fitness and pedal stroke and maintaining your speed.

Speed and suppleness

Riding on 'the Tacx' is a relatively easy way to up your track pace and make your muscles more supple. This makes for completely natural movements. You keep pedalling from the hips, just as you would on the road or track. A high pedalling frequency, that is needed for the right feeling in the legs, is also possible.

Some cyclists keep finding it hard to ride without a restraint. They choose the Tacx Antares and use the support for Antares to secure the bike, without the front wheel, and still cover the mileage in front of them.

The Tacx Antares is the official warming-up trainer at the 2012 Olympic Games.

> www.tacx.com

Galaxia

Antares

Galaxia T1100

These revolutionary Tacx rollers move with the rider. He can make sprints, stretch his legs and stand on the pedals without having to be afraid to fall. He can move more freely, because training on the Galaxia approaches the natural feeling of the road. Thanks to the kinetic energy that is created during accelerating, the trainer moves forward. When slowing down, the trainer moves backward again. This invention is so unique that is has been patented by Tacx.

The Galaxia 'swing system' might look a little unsteady at first sight, but it has the opposite effect: thanks to this novelty the rider can stay on the rollers more easily.

Antares T1000

You can cycle freely on these streamlined rollers and refine your coordination and technique in doing so. The heavy-duty tapered rollers ensure that it is almost impossible to ride off the machine. High concentration on steering is required when riding without a brace; this reinforces your sense of balance. The Antares – just like the Galaxia – is collapsible and measures only 80 cm when collapsed, making it easy to carry.

Support Antares T1150

Good material has to be reliable under all circumstances...

Bottles & bottle cages

Drinking is essential during training rides and races. A professional cycling team uses as many as 25,000 water bottles a year; a soigneur fills an average of 100 bottles before the start. They are indispensable for every rider. Filled with water, tea or energy drink, the bottle is your best friend through thick and thin, in good times and in bad times. Tacx knows this like no other. That is why the Tacx water bottles are easy to squeeze, in order to be able to drink fast while cycling. They have a large fill opening, a leak-free push-pull cap and feature a twist, pull or membrane lid which is easy to open and close.

Tacx also offers a large range of bottle cages. They are available in carbon, aluminium and plastic and differ from each other in design, weight and price. Typical about the design of the Tacx cages is the good clamping and the guidance in order to be able to place the bottle blindly. All Tacx bottle cages include stainless steel bolts.

Tacx and the Pro Teams

The professional teams choose Tacx for a reason: because good material has to be reliable under all circumstances. During the cycling season the bikes of all Tacx Pro Teams feature the Tacx bottle cages. In the mountain stages the riders use the extremely light Deva and Uma, which are made of carbon. In the other races they opt for the Foxy, a rising star. The Shanti is the new Tacx cycling bottle for the pros in 2013. It features a membrane lid, which always guarantees exactly the right dosage.

Shanti Collection

Bio Bottle Biodegradable

Shanti

The Shanti is the newest Tacx water bottle that stands out because of its membrane lid. This specially developed lid can be opened or closed with one movement. On the bicycle you can leave the bottle in the cage in the 'open' position, because the membrane system will prevent it from leaking. Only when you squeeze the bottle the water will come out, in exactly the amount you want. When you transport the bottle in your bag, you can 'lock' it. Together with the cycling bottles of the Tacx Pro Teams there also is the Shanti Collection, printed with subtle Tacx, Shanti and Bio-Bottle logos. The transparent version features a graduated scale.

Nature-friendly bottles

Biodegradable plastics are a modern necessity now that our environment is under growing pressure. Tacx has taken up the challenge to develop a biologically degradable, nature-friendly water bottle.

The Bio-Bottle has the same characteristics as the other Tacx bottles, but distinguishes itself because the plastic of the bottle is biodegradable. Adding a small amount of the Bio-batch material alters the molecular structure, which makes the material decompose into Biogas and Biomass. These nourish the soil and are entirely absorbed by nature.

Shiva Cycling bottles

Bio Bottle Biodegradable

Shiva

The Shiva is a sturdy water bottle with a powerful design. The screw-on cap features a leak-proof spout; the striking triangular form of the cap guarantees a secure grip. The bottle is easy to fill and clean. Its design makes the Shiva blend in perfectly with the Uma bottle cage. The Shiva Collection is available in trendy colours. You can also choose the transparent bottle with graduated scale and the special Bio-Bottle version. The Shiva is available in 500cc and 750cc.

Bottle Promotions

Deva & Uma Carbon

Tacx's new Deva carbon bottle cage is light as a feather. This makes it perfectly suitable for rides where every gram counts, like in the mountains. The Deva design is stylish minimalistic, with a print of the Tacx logo and a design in the colour silver.

The Uma is characterized by its powerful design and is also lightweight: only 19 grams. The Uma has a firm clamping that comes in very handy during trips on bad roads, like the Belgian cobblestones.

Uma Carbon
Black T6952

Carrefour
2012
Carrefour
Tinkoff

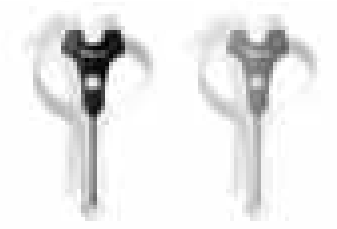

Foxy

The Foxy is a new bottle cage that immediately stands out because of its special design. On the upper side the cage has two small ears, which strikingly resemble the ones of a fox. They allow the bottle cage to clamp very well. The design and the combination of two sorts of plastic guarantee a good guidance for the bottle and extra grip while cycling.

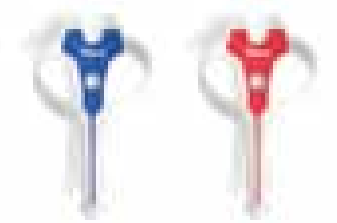

Because the Foxy has been manufactured out of plastic, it is very lightweight. The Foxy is available in black or white. For the inner side you can choose from different colours, such as silver grey, blue and red. Therefore everyone can always exactly find the combination that fits the bicycle.

Tao

The well-known Tao is a classic bottle cage that has gained widespread praise. The Tao Carbon, which often is used in mountain stages where every gram counts, weighs no more than 29 grams and comes with a Source water bottle. The regular Tao is stamped from aluminium sheet, pressed into shape, anodized and partially coated in rubber. This is not just crucial to the design, it also provides extra grip. The weight is just 39 grams. The Tao Light is made out of plastic and weighs 32 grams.

Allure & Uni

Both the Allure and the Uni have a very strong construction, that is being formed by an aluminium frame coated in plastic. The sleek, stylish and also robust design of the Allure Pro fits perfectly with the contemporary bicycles. Its weight is 66 grams. The Uni is a traditional bottle cage and weighs only 56 grams.

Sometimes a race has already been decided...

Tools

The Tacx bicycle tools are used on a daily basis by mechanics in the leading racing teams. They choose Tacx on account of its high quality and reliability. However, cycle maintenance is not just the preserve of these specialists. Anyone can get down to work at home with Tacx tools in order to keep the race or mountainbike in top condition. There are tools for assembly, for dismantling, for cleaning and tools for use on the road. Tacx tools excel in design and quality. Almost all spanners are hardened, shot-blasted and matt chrome plated. Also very popular are the repair stands; for many people an essential help when adjusting or repairing the bicycle.

Eyeing the future, Tacx keeps developing unique products, in order to keep supplying the mechanics and the cyclists with the best of the best. Tacx tools give you a technical advantage the others won't easily make up.

Tool Tube T4800

This tool tube can come in very handy when you are on the road. It is big enough for an inner tube and some small tools to take with you while cycling. The tube fits almost all bottle cages.

Spider Team

Spider Prof

The choice of the pros

Spider prof T3025

This is the absolute hit among repair stands. The stand is extremely lightweight thanks to its many aluminium parts. The tripod stands firmly on any surface. You can easily perform the toughest tasks. The height adjustable stand can be rotated and tilted, which makes working on bicycles even easier. Suited for almost any bicycle with a frame tube diameter of up to 50 mm.

Spider Team T3050

The Spider Team is the choice of the professional racing teams. The bicycle can be secured at the front or rear fork. The work surface can be rotated entirely. The plastic support for the bottom bracket has been designed such that the bicycle stays firmly in place during all operations. The Spider Team is suitable for race and mountainbikes with wheel diameters ranging from 24 to 28 inches.

Carbon assembly compound
With this unique paste you can assemble high-quality carbon, aluminium and steel parts like seat post, pedals and stem without difficulty. Protects against corrosion.

Tube 80 grams T4765
Sachet 5 grams T4763

Gem Bikestand T3125

The Gem Bikestand is a very handy help to park your bike. You can simply put the rear part in the composite hooks and your bicycle is safely parked. Because the wheel is slightly suspended, you are also able to perform minor adjustments.

Cyclestand

CycleMotion Stand

Cyclestand T3000

Collapsible repair stand for small and simple repairs. You can tilt the whole bike to the front; this is especially handy when you are working on the headset or handlebar. The Cyclestand is equipped with a mobile assembly tray and front wheel guides that will prevent the handlebar from turning sideways. Suitable for all bicycles.

CycleMotion Stand T3075

The perfect repair stand for heavy-duty repairs and maintenance. The CycleMotion Stand is equipped with a mobile assembly tray. The bicycle is secured at the front or rear fork and stands steady on the plastic support for the bottom bracket. Both fork holders can be adjusted in height as well as length. Suitable for both race and mountainbikes with wheel diameters ranging from 24 to 28 inches.

Wheel alignment gauge T4585
Spoke nipple key T4565
With the wheel alignment gauge you can check whether the wheel is still perfectly in the centre, to prevent you from cycling crooked. The spoke nipple key features the nipple sizes 13, 14 and 15 in one. Out of hardened steel and matt chrome plated.

Wheel truing stand

Exact T3175
For accurately checking height and sideways rotation. The wheel holders can be tilted forwards or backwards, so that the truing stand can be placed in any desired position. Fits on working surfaces with thickness between 2 and 5 cm and is suitable for wheels from 16 to 28 inches.

LumiLed tail light T4160

Chain lubricant spreader

Mitram T4770
This new Tacx product comes with 35cc Dynamic chain lubricant. Dynamic often comes out as the best chain lubricant in comparative tests of the leading cycle magazines.
With the Mitram chain lubricant spreader you can distribute the lubricant nicely. You don't have to spray, so you won't unnecessarily dirty the rest of your bike.
